

Task

Qualification: Web Application Development with Python L-4

Question: Django Project – Product Management

Design a Django web application that allows users to authenticate (Login, Register, Logout) and manage their own products data. Users should be able to apply CRUD operation (add, update, and delete products), including uploading an image for each product.

Project & App Setup

- **Project Name:** newproduct_project
- **App Name:** products
- **Model Name:** ProductModel, UserModel
- **Environment Folder:** testEnv

Model Requirements

UserModel:

Must be apply abstract user.

- Username, email, full_name, password

Product Model:

- name, description, price, product_image, production_date, created_by (relation with UserModel)

Templates and Navigation

Create a **base (master) template** with the following navigation menu:

- **Home:** Displays a welcome message for the Product Management System
- **Product List:** From this page user can manage (Create, Read, Update, Delete) their own data.

Note:

- Must be added navbar on the Register and Login Page.
- Before login navbar options will be (Register, Login) button.
- After login navbar options will be (Dashboard, Product List, Logout) button.
